

METHOD AND APPARATUS FOR STACKING SHEETS, AND METHOD AND
APPARATUS FOR MANUFACTURING LIQUID CRYSTAL DISPLAY PANEL

Abstract of the Disclosure

A broad crystal display panel having a color filter
substrate is supported by supporting nails and the middle
portion of a supporting span is pressed by a loading bar.
From this state, the supporting nails are removed to
release the supporting, and subsequently the supporting
nails are also removed to release the supporting the color
filter substrate. While preventing the displacement
between the color filter substrate and a TFT array sub-
strate, the color filter substrate and the TFT array sub-
strate can be stacked with a specified distance.
